

CROWD EXCESS AGENT

Attention outruns evidence. Risk decides.

ALPACA PAPER OPTIONS

Markets can be loud. Evidence can be quiet.

The opportunity is the unexplained gap—not raw sentiment.

ATTENTION

moves first

CROWD EXCESS

EVIDENCE

explains—or fails to

The agent trades only when attention + price outrun objective news and every deterministic gate passes.

Three sources. Three distinct jobs.

Search attention is a proxy—not community sentiment.

01

NAVER

Complete-day cross-border
search attention

boundary

03

OPENAI

Strict EvidenceAssessment only

Direction · materiality ·
confidence
Never contracts, size or orders

The trade is the residual—not the headline.

$$\text{CROWD EXCESS} = \text{SIGNED MOVE} \times \text{ATTENTION}$$

– NEWS DIRECTION × MATERIALITY × CONFIDENCE

POSITIVE

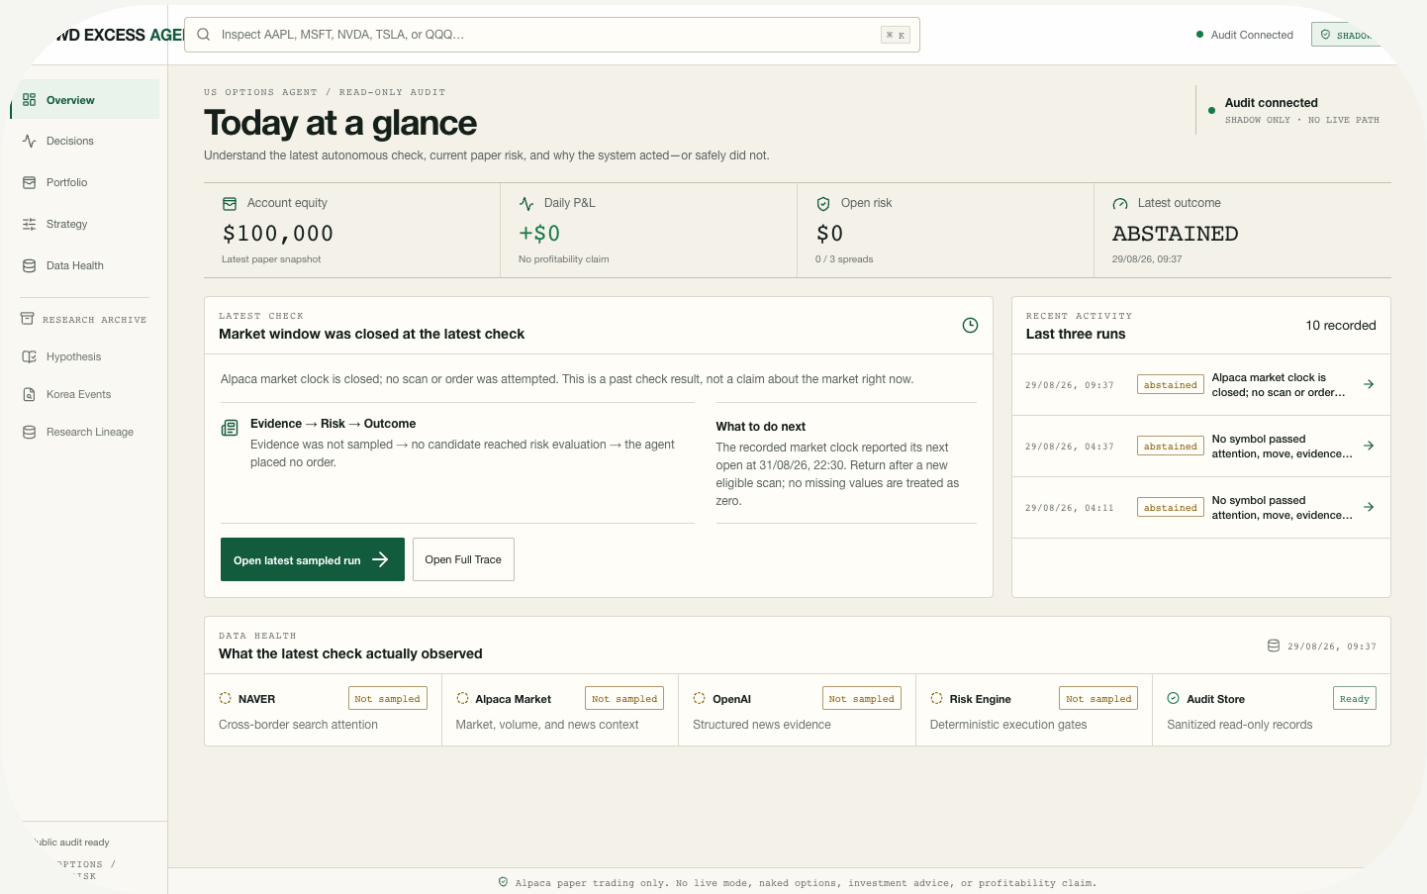

Upside enthusiasm looks excessive → bearish reversal candidate

NEGATIVE

Downside pessimism looks excessive → bullish reversal candidate

The model explains evidence. Deterministic code decides eligibility.

Every decision becomes an auditable trace.

EQUITY | \$0 P&L | 0 DRAWDOWN

0 positions | 0 open risk

No forced trade

No candidate cleared every evidence, liquidity and risk gate. Thresholds stayed fixed.

Failure safety is observable - not silent.

STRICT EVIDENCE

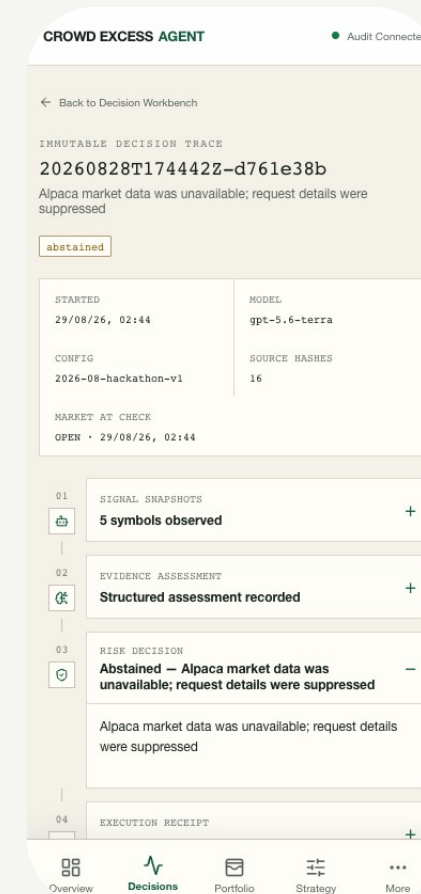

Strict schema; refusal, timeout or invalid output -> ABSTAIN

IDEMPOTENT

Deterministic ID; timeout -> lookup, never blind retry

WATCHED + DIAGNOSED

Stale-run watchdog; sanitized option-stage failure codes

Trust is the product when an agent can abstain.

- 01** Users: quant researchers, risk reviewers, agent operators
 - 02** Problem: opaque AI trades move capital without auditable evidence
 - 03** Value: inspect fixed gates and abstain when inputs are weak
